Here is the first of many posts of the results of this experiment (LIVE!!!).

DI WATER NO SEEDS DAY 1

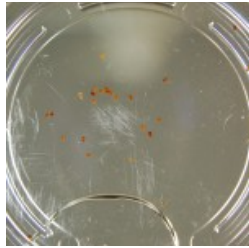

DI WATER DAY 1

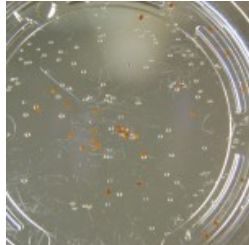

33% D2O DAY 1

66% D2O DAY 1

99.9% D2O DAY 1

DDW DAY 1

Outside of the bubbles in the DDW sample, there is no germination almost 24 hours after initial setup.

I'm still experimenting with the setup. These images were taken with a Nikon D40 in the setup I showed yesterday. I aligned everything and put the image in focus with the aid of a webcam. I'm considering just taking pictures with the webcam and will do a trial run this afternoon. More to come...
